

Hello Everyone,

I am asking you to read this report with an open mind. I know it is kind of "out there." (How's that for a tease?) :>)

At the same time, everything in today's report is in the public record. And, it has the potential to change our world---I hope in wonderful ways.

Energy is the theme. New (and better) energy sources are coming. It bodes well for our children and grandchildren.

As you read today's missive, it may seem unbelievable. But remember knowledge is doubling every 12 months--or every two to three years---depending on whom you listen to. Oh, and Quantum Computing and Artificial Intelligence are clearly gamechangers that will interface with the energy revolution.

So, with that as introduction, let's talk future world.

Signed, Your Went-To-Tomorrowland-At-Disneyland-When-I-Was-Eight-At-Thought-It-Was-Stupid Financial Advisor,

Greg

KKOB 11.01.2019 US & China & Future Energy

Bob: So, Greg, it's nice to have you in on a Friday. And I know you're on the theme of the US vs. China. And, so far, the focus has been on technology. But today you want to talk energy. Right?

Greg: I do. And let's start with this. Human beings are remarkably resourceful at transitioning from one energy source to another. For example, a few centuries back, almost all northern Europe had been deforested. Those people wanted to cook and stay warm, so they chopped down the trees. I get that.

Then just in time, the British discovered the “rock that burned” and coal prevailed--- - which made the Industrial Revolution possible. Then, just as coal was getting too expensive (and the air polluted beyond recognition) along came oil. Bob, in every way oil was superior to coal; so, we transitioned again.

Bob: I’m glad we did...and, I think I know where you are going with this. We all know the world isn’t running out of oil. But we also know the “easy oil” has been found. Eventually, we will need a new energy source.

Greg: Right. The oil-age isn’t done, but change is coming. And this is where the US & China again come into focus. Here’s what’s going on.

Very recently, both the US Navy and Lockheed Martin filed for some patents that sound like *Star Trek* stuff. Of course, Lockheed Martin is famous for their super-secret *Skunk Works* projects.

Anyway, patents were filed for... The Room Temperature Super Conductor, the Plasma Compression Fusion Device, and the High-Energy Electro-Magnetic Field Generator.

To summarize, some of this technology would be capable of producing as much as one terawatt (that’s 1 trillion watts) of power...and do it in a container ranging from two feet to six feet in diameter.

Bob, a tera-watt is vastly more powerful than today’s nuclear power plants...in a six-foot box!

Anyway, if this is true, then the Holy Grail of energy is coming into view. We're talking clean, carbon free, almost cost-free energy for everyone on the planet.

Is it here yet? No. But, by publicly filing patents, they must be feeling somewhat confident this stuff is real.

Oh, and before I forget, another technology is called the *Tesla Coil Magnet Motor*. And no this has nothing to do with Tesla cars. These small motors increase wattage power 100-fold and can power entire neighborhoods. They could make the huge power companies almost irrelevant.

Bob: Don't tell PNM--- and you're right. This sounds like Future world. And, look, I know this is going to sound a little crazy, but do you think they have been experimenting with some of this for a while now? Would this explain some of the UFO stuff?

Greg: Oh boy. OK. First, you're not crazy---- and you're not the first to ask. So, at the risk of sounding a little woo-woo----another patent filed was for the "*Hybrid Aerospace Underwater Craft*". The claim is this vehicle can navigate with equal precision through space, air, and water (!) with no heat signature. The patent filing said it can "*engineer the fabric of our reality at the most fundamental level.*"

So, Bob, picture a craft that comes in from space, dives effortlessly through the air, and then into the water and goes back up

again---all at an amazing speed. I promise-- oil isn't powering that.

Oh, and guess what? The Chinese are working on the same stuff. Anyway, can you see the potential for both good & evil if these technologies become reality?

Bob: Yes. And, where do you learn this stuff? I assume all the patent information is public, but still. I mean you never hear about this stuff on the news.

Greg: I read a lot---- from many sources. My job is to try to see what is coming (both good and bad) and then invest accordingly for my clients. And, yes, it also indicates I need a hobby.

Bob: Fascinating report. And, I can look all these patents up, right?

Greg: You can. Check it out. It'll make your jaw drop.

Bob: How do people reach you?

Greg: My number is 508-5550 or go to my website at zanettifinancial.com.
